

ShortStop™

Cable Fault Finder

Model JTE1001 with alligator clip adaptor.

At the push of a button on this hand-held device, you can measure the length of a cable, find opens and shorts, and inject tones to trace and identify cables and wire pairs.

With the unique PowerTone feature, you can get ABSOLUTE POSITIVE identification of the far end of the wire pair.

This is a MUST-HAVE tool for all contractors, electricians, cable and alarm installers; everyone who installs or repairs any kind of cable or wire.

One Tool One Trip One Person

- Checks ALL common cable pairs including: coax, 2 wire shielded, twisted multi-pair, AC wire pairs.
- Measures the distance to a short or an open.
- Measures cable length from one end on spools, in the wall, on the ground.
- Audible indication of shorted cable and high AC voltage.
- Measures cable length with proprietary Time Domain Reflectometry (TDR) Technology*.
- Single button On/Off operation.
- PowerTone™, unique multi-tone injection for positive cable identification*.
- 2500 foot range.
- Accurate to +/- 3% when set for correct cable.
- Input protected to 250 VAC.
- All internal components are protected against damage from moisture.
- No adjustments necessary for standard measurements.
- 50 hour battery life, intelligent auto-off.
- Complete with belt-clip case.
- Multiple adapters available.

*patents pending
