## ADSL FILTER

An ADSL Filter is a must if you have a digital subscriber line for your internet connections and use the same line for regular telephone communications. The ADSL Filter will prevent interference to your telephone and facsimile from the ADSL signals. It also prevents your fax and voice signals from interfering with the data moving in and out of your computer via the DSL connection.

See the illustration for connection information. You may place the ADSL filter at a telephone or fax machine if it is more convenient. Generally, connection at the "service entrance" is best ( as shown in illustration ) as it can isolate all conventional telephone equipment with one filter. However, you may place a filter at each telephone and each facsimile machine if access to the service Entrance jack is not practical; using several filters will not degrade service.
